Exercise: Ratio and Proportion - Formulas

☑ Ratio and Proportion - Formulas

☐ Ratio and Proportion - General Questions

1. Ratio:

The ratio of two quantities $\frac{a}{b}$ and $\frac{b}{b}$ in the same units, is the fraction $\frac{a}{b}$ and we write it as $\frac{a}{b}$: $\frac{b}{b}$.

In the ratio a: b, we call a as the first term or antecedent and b, the second term or consequent.

Eg. The ratio 5: 9 represents $\frac{5}{9}$ with antecedent = 5, consequent = 9.

Rule: The multiplication or division of each term of a ratio by the same non-zero number does not affect the ratio.

Eg. 4:5=8:10=12:15. Also, 4:6=2:3.

2. Proportion:

The equality of two ratios is called proportion.

If a:b=c:d, we write a:b:c:d and we say that a,b,c,d are in proportion.

Here a and d are called extremes, while b and c are called mean terms.

Product of means = Product of extremes.

Thus, $a:b::c:d \Leftrightarrow (b \times c) = (a \times d)$.

3. Fourth Proportional:

If a:b=c:d, then d is called the fourth proportional to a, b, c.

Third Proportional:

a:b=c:d, then c is called the third proportion to a and b.

Mean Proportional:

Mean proportional between a and b is ab.

4. Comparison of Ratios:

We say that
$$(a:b) > (c:d) \Leftrightarrow \frac{a}{b} > \frac{c}{d}$$
.

Compounded Ratio:

The compounded ratio of the ratios: (a : b), (c : d), (e : f) is (ace : bdf).

5. Duplicate Ratios:

Duplicate ratio of (a:b) is $(a^2:b^2)$.

Sub-duplicate ratio of (a:b) is (a:b).

Triplicate ratio of (a:b) is $(a^3:b^3)$.

Sub-triplicate ratio of (a:b) is $(a^{1/3}:b^{1/3})$.

If
$$\frac{a}{b} = \frac{c}{d}$$
, then $\frac{a+b}{a-b} = \frac{c+d}{c-d}$. [componendo and dividendo]

6. Variations:

We say that x is directly proportional to y, if x = ky for some constant k and we write, $x \propto y$.

We say that x is inversely proportional to y, if xy = k for some constant k and

we write,
$$x \propto \frac{1}{y}$$
.
